PUBLIC CALL FOR BIDS

Scaled bids or proposals will be received by the Common Council of the City of Phoenix for lithographing two thousand (2,000) Street Improvement Bonds, up to, but not later than the 25th day of February, 1913.

Said Bonds shall have printed coupons attached for the semi-annual

interest and principal payments to be made on said Bonds, and a form of said Bonds will be furnished all bidders upon request.

For bids and form of Bond address

FRANK THOMAS, City Recorder, City of Phoenix Arizona.

The Mines of Arizona

(Continued from Page 14.)

was encountered measures 3 1/2 feet. Colonel Browne also states that the company has been making shipments from its Copper Prince mine, of copper ore carrying from 10 to 14 per cent copper per ton. Also that the company has nearly finished a forty-ton mill at Constellation on the Hassayampa river. This mill is to start up next month.

W. H. Smith superintendent of the White Horse copper company's property situated in the Chiricahua mountains Cochise county near San Simon reports a big strike of copper ore and the most important ever discovered in the district. If I remember correctly the formation is lime with its attendant alterations to spar. About 6 years ago a copper nugget was found on this ground weighing over 30 pounds. Mr. James Douglas was in town during the week he is now the moving spirit in two properties undergoing development adjoining the United Verde. There are plenty of funds behind the project and the work is being carried out in a systematic and mining-like manner. Full detailed accounts of this enterprise have been given in previous issues.

At present the Inspiration at Globe is employing 270 men on underground work and 40 men on surface work. This force is employed on preparatory mining work. The hundreds of men engaged in the mill construction and railroad grading are employees of contractors.

The inclined shaft has reached its objective point the 3480 foot level (the upper tram level). It has been decided to continue this shaft to a depth of 100 feet below the upper tram level, for the purpose of making a raise from that depth to the 3480 where a waste pocket will be cut the waste to be dropped through the raise and lifted through the inclined shaft to an upper level through which it will be conveyed to the surface. The Miami and Inspiration ores are of a similar nature and the Inspiration reduction plant will follow closely that of the Miami.

Japanese copper production for 1912 is estimated at 65,000 tons. The Asahi mine retained first position with an output of 12,000 tons. At the Massolett property near Benson, a notice of which was made in these columns some time ago, another lense of high grade ore has been encountered and it is stated the appearance of the property is very promising. The mill is expected to be in operation next month.

The Texas Arizona in the same neighborhood has also rich ore in their workings and is making semi-weekly shipments. The Arizona Michigan and the Keystone are also developing very satisfactorily.

Geo. E. Gunn after a well earned rest in Honolulu, visited the Magna property at Superior and also the

old Reynert mine. Gunn and Thompson were the finances of the Magna property and they may also arrange to finance the Reynert. Mr. Gunn left Phoenix for the Grand Canyon where he will spend a few days before leaving for New York.

The Goodwin Brothers have bought their group of claims near Superior to the Calumet and Arizona company. The bond has a life of two years. The acquisition of these claims makes the C & A holdings amount to about 170 claims. The company is pushing work for their development with due vigor and all the work is performed in a very substantial manner. The C & A gives every evidence of having great faith in the properties by the manner they are going about the development.

Activities of Mr. Hammond.

John Hays Hammond surely likes to see his name in print. He is always having an exhortatorial operation scolding an old camp to make it and acquiring platinum poisoning, or running for the presidency or dining with royalty. Occasionally there is a variation such as having the best paid man in the United States or he is forming a large syndicate to purchase the seven planets, or half of South America. Now he is getting publicity through the desire to go and pacify the Yaqui Indians in Sonora. We remember once his success in this line in South Africa. But when the Boers got hold of him he perspired so much that it was necessary to change his boiled shirt before turning over a few millions to obtain his release.

The Yaquis don't want pacifying they simply want fair treatment. Any body of white men would do the same, as they have done under similar circumstances. They have been driven from their lands which they have farmed for all time. I have been a witness, when Mexican soldiers have turned their horses into a growing corn field and destroyed the whole crop during the night. The Yaquis are an industrious hard working class, are good agriculturalists and miners and will make splendid law abiding Mexican citizens when given a square deal. Mexico is realizing this and undoubtedly endeavoring to be just. The completion of the new 500 foot unit of the Old Dominion concentrator depends largely on when the shipments of steel come through from the east, but if there should be no delay the concentrator should be running in the late fall of this year. The excavation for the crusher plant is completed and the forms are in place for the concrete. Excavation work is proceeding at the site of the sampling mill and concrete ore bins.

The foundation for the new Nordberg compound-gear hoist at the shaft was completed early this month and is ready for the hoist, which has been delayed in shipment.

Work has been started cutting pockets on the 800 and 1200 foot levels. The ore bins at the Kingdom shaft

consist of four 100 ton capacity pockets or 400 tons in all.

An Alaska Plan.

Among excellent recommendations made by Mr. Walter E. Clark in his annual report as governor of Alaska is one to the effect that holders of mineral claims, be allowed to pay in lieu of assessment work \$100 per claim per year, into a fund for highway and bridge construction. This plan has been followed in Yukon territory with very satisfactory results. Why wouldn't some plan like this be well to inaugurate for the mines of Arizona. It is well understood that 95 per cent of the assessment work is absolutely thrown away as far as efficient development of the property is concerned. Hence the expenditure for such a purpose is thrown away. The money would be more advantageously spent by building roads to and in our mining districts. It is the only way we will get roads built unless local effort in some district takes it in hand.

Excellent samples of Chinabur ore (quartzite) have just been brought from the new find on the Verde river north of Phoenix and recently

noticed in these columns. The work being performed upon the property suggests a valuable future. Any one interested can see specimens of the ore at 307 North First street, in this city.

A True Story.

The following is given to me as a true story. A so-called mining company was formed and a total expenditure of \$21,000 had been made, mostly in purchasing old machinery that might have been of some use in a creamery or shoe factory but absolutely worthless in mining. The company got tired of pulling out money and shut off the funds and ordered an investigation of its books and the enterprise in general and here is a general summing up of the conclusions arrived at:

For worthless machinery (junk) the labor in connection with it, the manager's salary and expenses, \$20,000.

\$92.50 for mining 750. The books showed that two men had been employed one day cleaning out some old workings; total expenditure, \$21,000.

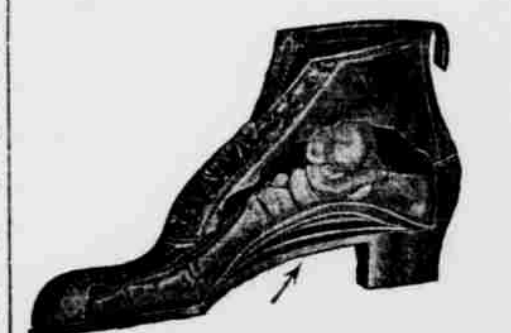

The White Elephant mine near Cerat, Mohave county, has started shipping ore, which carries high values in silver lead.

Churn drilling continues on the Turquoise property but is slow on account of the character of the ground which will undoubtedly have to be raised. The drill demonstrates

Here Is Foot Comfort

This is a broad claim to make, but the Scholl's "Foot-Eazer" eases feet, provides absolute means of foot comfort.

When the arch of the foot is not properly supported—and the modern shoe does not give this required support—the feet tire and ache and pain and become feverish and then there is a twitching and a seeming strain on the limbs, and frequently a feeling of fatigue over the whole body.

The arch of the foot, where the body's weight is carried, needs a rest. THE SCHOLL'S "FOOT-EAZER" supports the arch or instep and takes away all muscular strain, equalizing the weight and bearing.

Made of German Silver springs, leather covered. Self-adjusting to any foot. Can be changed from one pair of shoes to another and can be worn with comfort by anyone.

Women who do housework, or clerks in stores or offices, or anyone whose occupation requires them to do much standing or walking should buy a pair of "Foot-Eazers" today.

You cannot have restful feet until you do wear them.

All sizes, for men and women. Price \$2.00 per pair.

Endorsed by Physicians—by People who wear them. For sale by

SHIRLEY & SHIRLEY,
39 East Adams St.

Special Sale on rugs and dinnerware.
